

Here is an overview of my approach and the steps I took to redesign the website given.

- Understand the website: I started by thoroughly analyzing the website to understand its content and purposes.
- Analyze the defects: I analyze the defects in the website and make a point about these defects so that while redesigning the website, I should keep in mind to not make these mistakes.
- Make a Roughly picture: I made a rough sketch of how the website should look like after all changes.
- Implement: Then I started to make the overview of how website should be made to make it look more presentable and accordingly to the SEO practices.

Points To Be Highlighted

1. The LOGO of the website should be main attraction and should be on top right corner in the header section.
2. First we should ask from the user whether he/she wants to LOGIN/REGISTER in the website, if already a user then simply click on LOGIN and if not then REGISTER.
3. We should also add a CHATBOT which helps to clear all the doubts of a new user.
4. There are some links which are not placed in the right place like all the CLICK HERE links are same.
5. The patent image should be in footer section for the attraction.
6. The main menu bar which should be in header section is to be placed in footer section.
